4) 10/3/26

1) The sum of the present ages of Bill and George is 11 times the difference age. 5 years hence their total ages will be 13 times the difference of their ages. what is the present age of elder one?

B + G = 11 time diff

5 years after

total age = 13 time diff

11d − 13d = 10d → B×5 = 5 } 10, G×5 = 5

2d = 10

$\boxed{d = 5}$

11×5 = 55

13×5 = 65

elder :-

(55+5)/2

= 60/2

= 30 years

2) The average age of a group of 4 friends is 36 years. the youngest friend amongst them is 6 years old. what was the group at the time of birth of the youngest friend.

① avg age of 4 frd is 36 years.

total ages = 36×4

= 144 ages

② 144 ages − 6 years } remove youngest

= 138

138 − 18 → 6×3 = 18

= 120

average = 120/3 = $\boxed{40}$

③ The ratio between the present ages of A and B is 3:5 respectively. if the difference between B's present age and A's age after 4 years is 2. what is the total of A's and B's present ages?

A B

3x 5x

A → 3x+4

B presentage age − 3x+4

5x − (3x+4) = 2

5x − 3x − 4 = 2

2x = 6

$\boxed{x=3}$

A → 9

B → 15

total age = 24

4) A number is as much 36 < 80 find the number.

(num − 36) = (80 − num)

36 80

x − 30 = 80 − x

36 num = 80 − num

x + x = 2x = 116

80 + 0

$\boxed{x=58}$

⑤ father is 3 times more aged than is daughter.

if after 5 years, he would be 3 times of daughter's age, then further after 5 years, how many times he would be of daughters age?

3 : 1

3x+5 / x+5

3x	x
3x+5	x+3

⑥ if the two digits of the age of Mr. Manoj are reversed then the new age so obtained is the age of his wife. 1/11 of the sum of their ages is equal to the diff between their ages. if Mr. Manoj is elder than his wife then find the diff their age?

10x + y → M

10y + x → W

1/11 (11x + 11y) = 9x − 9y

1/11 × 11(x+y) = 9(x−y)

x + y = 9x − 9y

10x = 8y

x/y = 10/8 = 5/4

x = 5, y = 4

54, 45 → age

⑦ The ages of Ram and mohan differ by 16 years. six years ago, mohan's age was twice as that of Ram's find their present age.

Ram	mohan
x−6	x+16−6
x−6	x+10

2(x−6) = x+10

$3x - 18 = x + 10$

$4x = 28$

$x + 10 = 3x - 18$

$x - 3x = -18 - 10$

$-2x = -28$

$\boxed{x = 14}$

(8) A is three times as old as B. C was twice as old as A four years back. in four years A will be 31 years. what is the present age of B and C?

$A \rightarrow 31 - 4 = 27$

$27 = 3B$

$\boxed{B = 9}$

$A = 3B$

$31 = 3B$

$27 = 3B$

$\boxed{B = 9}$

C was 2 twice A four yeb.

$27 - 4 = 23$

$2 \times 23 = 46$

$\boxed{46 + 4 = 50}$

(9) The sum of the ages 4 children born at the interval of 3 years each is 58 years. what is the age of the youngest child?

$(x) + (x+3) + (x+6) + (x+9) = 58$

$4x + 18 = 58$

$4x = 58 - 18$

$x = 12$

$\boxed{x = 10}$

(10) The avg of mother and her children is 12 years which is reduced by 5 years if the age of the mother is excluded. how old the mother?

avg of $12 \times 7 = 84$

$7 \times 6 = 42$

$84 - 42 = 42$ ans//.
